

Personal Resume

 Name: YOU YI TXUAN  Date of Birth: 2003-09-01
 Mobile Number: 0164197498  Email: yitxuanyou506@gmail.com
 Graduated from: Beijing Institute of Technology

Educational background

2022.09-2026.06 Beijing Institute of Technology Computer Science and Technology

GPA: 3.5

Core Courses: Advanced Language Programming (Java/C++), Data Structures and Algorithms, Computer Networks, Operating Systems, Principles of Database Systems, Software Engineering.

Professional skills

- Expert in leveraging next-gen agents (Cursor, Trea) for rapid MVP prototyping and full-stack implementation.
- Skilled at translating complex architectural logic and design patterns into precise AI prompts for code generation.
- Backend Development: Proficient in Java Core (Collections, Reflection, I/O streams); possess excellent object-oriented design patterns and coding practices; deeply understand JVM runtime data areas, class loading, and Garbage Collection (GC) mechanisms.
- Concurrent Programming: Experienced in Java concurrent programming; master AQS, synchronized, volatile, CAS, and thread pool core parameter tuning; adept at troubleshooting and resolving issues in multi-threaded environments.
- Mainstream Frameworks: Proficient in utilizing core frameworks including Spring Boot, Spring Wrapper (Spring MVC), and MyBatis; possess a profound understanding of IoC and AOP principles.
- Data Storage: Proficient in MySQL database design; master index optimization, transaction control, and locking mechanisms; strong capability in complex SQL writing and performance tuning; experienced with practical Redis use cases such as cache stampede mitigation and delayed queues.
- Core Tools: Skilled in mainstream development tools like IDEA, Maven, and Git; command conventional Linux system operations and maintenance commands; possess strong technical documentation writing skills.

Internship experience

2025.03-2025.06 北京马中教育科技有限公司 Website Development Intern

- Designed and maintained MySQL table structures, writing efficient queries combined with Redis caching strategies to significantly boost the response speed of complex website queries.
- Independently implemented a multi-language localization framework supporting three languages (including Chinese and English); developed product display and article management modules, and integrated SMTP services for automated email notifications and backend management needs.
- Deployed and maintained the website (daichunlin.my) using Docker containers, substantially improving user browsing experience and backend data management efficiency.

Project experience

2026.01-2026.03

YY Music

AIGC + Decoupled Front/Backend Music Platform

An AIGC-based music generation and commercialization web platform. Built on a decoupled frontend/backend architecture using React + Vite + Spring Boot + MySQL + Redis, establishing a complete business loop: "AI Creation - Points Consumption - Payment & Top-up - Platform Management."

- Developed a complete generation pipeline utilizing ComfyUI workflow capabilities, integrating prompt/lyric assistance, task submission, Redis delayed queue status polling, asynchronous callbacks, database persistence, and exception compensation.
- Integrated LLM Q&A capabilities, achieving precise knowledge retrieval based on Vector Store and LLM Tools Calling.
- Responsible for designing the WeChat Pay V3 pipeline, implementing RSA signature generation, WeChat platform certificate fetching, callback signature verification, and order querying; secured payment callbacks and transaction consistency in asynchronous notification scenarios, reducing transaction anomalies and reconciliation risks.

2025.08-2025.09

YY CHAT

Cross-Platform Instant Messaging System

A WeChat-style cross-platform desktop instant messaging application using a C/S architecture. Built with Spring Boot and Netty on the backend for high-performance communication services, and Electron + Vue 3 + SQLite on the client side for a native-like user experience.

- Led the real-time message push system based on Netty WebSocket, utilizing Channel context management to implement user online status awareness, private/group chat message broadcasting, and session initialization, solving the high latency and high connection costs associated with traditional HTTP polling.
- Delivered a unified Redis caching solution, building a cache layer around hotspots like Tokens, heartbeats, contact lists, and system configurations; integrated AOP global interceptors for login status verification and permission control, significantly reducing database access pressure and ensuring API stability under high concurrency.

Award Experience

- 2025: Third Prize, The 2nd OpenAtom Competition - Space Station Internal Environment Monitoring System Challenge
- 2025: Third Prize, "China Telecom Cup" Campus AI Agent Innovation and Creativity Competition
- 2025: First Prize, The 3rd "10 Lines of Code" Challenge at Beijing Institute of Technology
- 2024: Third Prize, The 2nd "10 Lines of Code" Challenge at Beijing Institute of Technology
- 2023: Third Prize, Information System Innovation Competition
- 2023: Second Prize, The 1st "10 Lines of Code" Challenge at Beijing Institute of Technology

Self-evaluation

- Fast Learner & Technical Problem Solver: Possess exceptional self-learning capabilities and engineering implementation skills; able to quickly master and deploy cutting-edge technologies (e.g., AIGC, ComfyUI workflows, LLM integration) and rapidly adapt to high-intensity development environments.
- Team Collaboration & Project Management: Served as project leader/team captain multiple times; possess outstanding teamwork and organizational coordination skills; emphasize code standards and technical documentation; able to work under pressure to ensure high-quality, on-time project delivery.
